

# 100 篇国半公司运放应用笔记文档

[AN-A: The Monolithic Operational Amplifier A Tutorial Study](#)

[LB-1: Instrumentation Amplifier](#)

[LB-2: Feedforward Compensation Speeds Op Amp](#)

[LB-4: Fast Compensation Extends Power Bandwidth](#)

[AN-4: Monolithic Op Amp- The Universal Linear Component](#)

[LB-5: HighQ Notch Filter](#)

[LB-6: Fast Voltage Comparators with Low Input Current](#)

[OA-07: Current- Feedback Op Amp Applications Circuit Guide](#)

[LB-11: The LM110- An Improved IC Voltage Follower](#)

[OA-11: A Tutorial on Applying Op Amps to RF Applications](#)

[OA-12: Noise Analysis for High Speed Op Amps](#)

[OA-13: Current- Feedback Loop Gain Analysis](#)

[TP-14: Low Voltage Techniques \( Addendum to AN211\)](#)

[OA-14: Improving Amplifier Noise Figure for High 3rd Intercept Amplifiers](#)

[OA-15: Frequent Faux Pas in Applying Wideband Current Feedback Amplifiers](#)

[TP-15: Reducing DC Errors in Op Amps \( Addendum to AN241&242\)](#)

[TP-15: Reducing DC Errors in Op Amps \( Addendum to AN241&242\)](#)

[LB-16: Easily Tuned Sine Wave Oscillators](#)

[OA-16: Wideband AGC Amplifier as a Differential Amplifier](#)

[LB-17: LM118 Op Amp Slews 70V/microsecond](#)

[OA-19: CLC505 Op Amp Capable of Micro Power Operation](#)

[LB-19: Predicting Op Amp Slew Rate Limited Response](#)

[LB-20: A Fully Differential Input Voltage Amplifier](#)

[OA-20: Current Feedback Myths Debunked](#)

[AN-20: An Application Guide for Op Amps](#)

[LB-21: Instrumental Amplifiers](#)

[OA-21: Component Pre-distortion for Sallen Key Filters](#)

[OA-22: Pushing Low Quiescent Power Op Amps to Greater than 55dB Tone Intercept](#)

[LB-22: Low Drift Amplifiers](#)

[LB-23: Precise Tri- Wave Generation](#)

[OA-23: CLC522 Advanced Operating Considerations and Military Specifications](#)

[LB-24: Versatile IC Pre Amplifier Makes Thermocouple Amplifier with Cold Junction Compensation](#)

[OA-24: Measuring And Improving Differential Gain and Differential Phase For Video Buffers w/ Disable](#)

[AN-24: A Simplified Test Set for Op Amp Characterization](#)

[LB-25: True RMS Detector](#)

[OA-25: Stability Analysis of Current Feedback Amplifiers](#)

[OA-26: Designing High Speed Active Filters](#)

[LB-26: Specifying Selected Op Amps and Comparators](#)

[LB-27: Micropower Thermometer](#)

[OA-27: Low- Sensitivity, Lowpass Filter Design](#)

[OA-28: Low- Sensitivity, Bypass Filter Design with Turning Method](#)

[AN-29: IC Op Amp Beats FE T<sub>son</sub> Input Current](#)

[OA-29: Low- Sensitivity, Bypass Filter Design with Parasitic Compensation](#)

[AN-30: Log Converters](#)

[OA-30: Current vs. Voltage Feedback Amplifiers](#)

[OA-30: Current vs. Voltage Feedback Amplifiers](#)

[AN-31: Op Amp Circuit Collection](#)

[OA-31: Current- Feedback Amplifiers](#)

[AN-31: Op Amp Circuit Collection](#)

[LB-32: Micro Volt Comparator](#)

[LB-39: Circuit Techniquesfor Avoiding Oscillationsin Comparator Applications](#)

[AN-41: Precision IC Comparator Runsfrom Plus5V Logic Supply](#)

[LB-42: Get Fast Stable Response From Improved Unity- Gain Followers](#)

[LB-44: Get More Power Outof Dualor Quad Op- Amps](#)

[LB-52: A Low- Noise Precision Op Amp](#)

[AN-71: Micropower Circuits Usingthe LM4250 Programmable Op Amp](#)

[AN-72: The LM3900 A New Current- Differencing Quadof Plusor Minus Input Amplifiers](#)

[AN-74: LM139/ LM239/ LM339A Quadof Independently Functioning Comparators](#)

[AN-79: IC Preamplifier Challenges Chopperon Drift](#)

[AN-87: Comparingthe High Speed Comparators](#)

[AB-104: Photo- Diode Current- To- Voltage Converters](#)

[AN-104: Noise Specs Confusing?](#)

[AB-107: Reworkingthe LLP Chip Scale Package](#)

[AB-108: Unlimited Capacitive Loadrive Op Amp Takes Guesswork Out Of Design](#)

[AB-116: Lower System Cost Solutionfor Transmitting Video](#)

[AN-116: Usethe LM158/ LM258/ LM358 Dual, Single Supply Op Amp](#)

[AN-116: Usethe LM158/ LM258/ LM358 Dual, Single Supply Op Amp](#)

[AN-211: New Op Amp Ideas](#)

[AN-222: Application Note222 Super Matched Bipolar Transistor Pair Sets New Standardsfor Driftand Noise](#)

[AN-227: Applicationsof Wide- Band Buffer Amplifiers](#)

[AN-241: Workingwith High Impedance Op Amps](#)

[AN-242: Applyinga New Precision Op Amp](#)

[AN-242: Applyinga New Precision Op Amp](#)

[AN-253: LH0024and LH0032 High Speed Op Amp Applications](#)

[AN-256: Circuitryfor Inexpensive Relative Humidity Measurement](#)

[AN-261: Low Distortion Wideband Power Op Amp](#)

[AN-262: Applying Dualand Quad FET Op Amps](#)

[AN-263: Sine Wave Generation Techniques](#)

[AN-265: An Electronic Watt- Watt- Hour Meter](#)

[AN-266: Circuit Applicationsof Sample- Hold Amplifiers](#)

[AN-272: Op Amp Booster Designs](#)

[AN-278: Designingwitha New Super Fast Dual Norton Amplifier](#)

[AN-285: An Acoustic Transformer Powered Super- High Isolation Amplifier](#)

[AN-286: Applicationsofthe LM392 Comparator Op Amp IC](#)

[AN-294: Special Sampleand Hold Techniques](#)

[AN-295: A High Performance Industrial Weighing System](#)

[AN-298: Isolation Techniquesfor Signal Conditioning](#)

[AN-299: Application Note299 Audio Applicationsof Linear Integrated Circuits](#)

[AN-300: Simple Circuit Detects Lossof4-20mA Signal](#)

[AN-311: Application Note311 Theoryand Applicationsof Logarithmic Amplifiers](#)

[AN-346: High- Performance Audio Applicationsofthe LM833](#)

[AN-447: Protection Schemesfor BI- FET Amplifiersand Switches](#)

[AN-480: A40M Hz Programmable Video Op Amp](#)

[AN-549: LM6361/ LM6364/ LM6365 Fast Op Amps Offer High Speedat Low Power Consumption](#)

[AN-597: Current Feedback Amplifier](#)

[AN-775: Specificationsand Architecturesof Sample-and- Hold Amplifiers](#)

[AN-779: A Basic Introduction to Filters- Active, Passive and Switched- Capacitor](#)

[AN-813: Topic on Using the LM6181-A New Current Feedback Amplifier](#)

[AN-1112: Micro SMD Wafer Level Chip Scale Package](#)

[AN-1187: Leadless Leadframe Package](#)

[AN-1201: 8-Lead LLP Thermal Performance and Design Guidelines](#)

[AN-1240: Video Transmission over Twisted Pair Wire](#)

[AN-1516: Pspice Universal Test Circuits](#)
